To My Customers:

Danish Ball Head and Round Head is an exceedingly short crop this year. Many cultures have failed entirely and I am only receiving part of my Danish seeds ordered

Order early, my supply is limited

For the seedgrowing firms it is necessary not to stop upon the ground gained, but to work ahead and keep on improving the strains, in order that these may always be on the level with the best obtainable.

My growers are always working thoroughly on such improvements. Our work has been successful. In our trial grounds we are every year carrying out numerous comparative trials, not only with our own varieties and strains, but we are also trying to procure seeds from novelties, both Danish and foreign varieties and strains, in order to know them, compare them to our own and thereby always be up to date. In this way our customers have the very best warranty that we are always delivering the best seed of the most productive varieties and strains.

Cabbage

The growing of Cabbage seed is one of the specialties of our firm, and large areas are contracted for every year. Great attention is paid to these cultures, and consequently our Cabbage seed has obtained a good name all over the United States of America. In improving the varieties neither work, time or money is spared, and during quite a few years a scientific family breeding has been applied upon all the important varieties, and this has shown good results.

Extra Early Round

This new cabbage is very early, heads are solid as a rock, weight from 5 to 8 lbs. It is surely the earliest of all Round Cabbage, and will stand long after being ready to cut without splitting. Give Extra Early Round a trial for your first early crop. Some of my customers have grown this cabbage in 60 days for car-load shipments as early as Aug. 2nd. None earlier, none better.

Danish Ball Head short stem selected, is a Danish cabbage, the outer leaves having a purple tint and the small veins showing a very rich color, an extra fine strain and the produce dealers favorite cabbage.

Cauliflower

Call for my Snowball and you get the Earliest, most dwarf, surest header, most snow-white, the best strain on the market—try it.

The moist, mild seacclimate gives to Denmark the most ideal conditions for growing Cauliflower seeds. In some specially favored regions this culture has already been practised for 50 years, and during the course of time it has taken such an upward step that Denmark is now supplying a number of countries with seed of this important vegetable, and the Danish Cauliflower seed has good cause for the world-name, which it has attained. The cultures are worked with great science, and for seedbearers are selected only typical, faultless plants. Great attention is paid when improving the varieties.

Grow what the market wants in Cabbage. For Danish set your plants about 18 inches in the row and rows about three feet apart.

I wish to thank my thousands of friends for the fine testimonials sent me from time to time, and I hereby thank you all. Keep sending them to

Yours very truly

M. KLITGORD
